Chaukas चौकस

Paste the message. Get the verdict. If you've already paid, beat the golden hour.

AI scam triage and golden-hour reporting for Indian cyber fraud

CodeVerse 2026 · Open Innovation Hackathon · Prototype submission

Rules first, AI second, reasons always.

The first hour decides

Fraud is fast. Reporting is slow and confusing.

Before the payment

A fake KYC SMS, a “digital arrest” call, a collect request. Victims are rushed and cannot tell real from fake in the minute that matters.

After the payment

Banks can still freeze funds early, but the victim doesn’t know what to file, where, or what to say. Panic eats the window.

For the family

Parents and elders are the main targets and often don’t read English. Relatives only find out after the money is gone.

Two modes, one app

Built and running: web app, API, database, 3 languages.

Mode 1 · Check

- Paste text, link, UPI ID, phone, or a screenshot
- HIGH / MEDIUM / LOW with scam type
- Exact phrases highlighted in your own text
- “Seen before” from community reports
- Never says “safe”, only “no known red flags”

Mode 2 · Golden hour

- Extracts amount, UTR, payee, time
- 60-minute countdown
- Drafts: 1930 call script, cybercrime.gov.in complaint, bank freeze email, scammer report
- Nothing auto-filed: the victim sends every draft
- Feeds confirmed scammer IDs back to the community

How a verdict is made

Deterministic first. AI is a bonus, never a single point of failure.

1 Rule engine

Multilingual regex signals + link analysis. Every hit keeps its exact phrase.

2 Community intel

PostgreSQL store of reported UPI IDs, phones, domains.

3 Gemini (Spring AI)

Vision + structured JSON. Optional, 10 s timeout.

4 Verdict merger

Combines scores, cites phrases, drops anything not in the text.

If Gemini fails or no key is set, steps 1, 2 and 4 still return a verdict. In tests this path is the default.

What is built

Prototype scope vs. the idea deck

Feature	Status in prototype
Rule engine: 10 scam families, 4 scripts (EN, romanised HI, Devanagari, Gurmukhi)	Built · 40 automated checks passing
Link analysis: lookalike brands, shorteners, IP hosts, TLDs	Built
Community scam-intel store + “seen before” escalation	Built (demo seeded, prod starts empty)
Gemini screenshot reading + structured JSON via Spring AI	Built · optional, needs API key
Golden-hour extraction + countdown + 4 drafts, EN/HI/PA	Built
Family guardian invite + alerts (scam type only)	Built
JWT auth, rate limit, Flyway, Docker, Render + Vercel config	Built

Architecture & stack

Frontend

React 18 · Vite · Tailwind
Check · Golden hour · Family
English / हिन्दी / ਪੰਜਾਬੀ

API

Java 21 · Spring Boot 3.4
Spring Security + JWT (BCrypt)
Virtual threads · rate limiting

AI

Spring AI → Gemini
(OpenAI-compatible endpoint)
Vision + JSON, 10 s timeout

Data

PostgreSQL 16 · Flyway
H2 for dev/tests
Hash-only check history

Core

Framework-free detection engine
`in.chaukas.core`: rules, domains,
extractor, merger, kit generator

Delivery

Docker Compose · Render · Vercel
JUnit 5 + MockMvc + core smoke
README, demo script, checklist

Designed to be safe to rely on

Choices made on purpose

Never “safe”

The lowest verdict is “no known red flags” with a reminder it is not a guarantee.

Reasons, not scores

Every flag cites a phrase that is actually in the text. AI-invented phrases are discarded.

Nothing auto-filed

Chaukas drafts; the victim sends. Missing facts show “please add”, never guesses.

Privacy

Hash-only history. Guardian alerts carry scam type, never the message.

Targets & what’s next

Prototype targets from the idea deck, and the roadmap

Prototype targets

- Paste → verdict in under 5 seconds (rules path is instant; AI adds latency only when enabled)
- “I’ve been scammed” → fileable complaint in under 3 minutes
- Works with no AI key at all

Next

- WhatsApp / SMS share-sheet intake
- Bank-specific freeze templates
- Voice-note detection for digital-arrest calls
- Privacy-preserving intel sharing with banks & PSPs
- More Indian languages

Try it

```
Live app:       <add Vercel URL>
API health:     <add Render URL>/api/health
GitHub:          <add repository URL>
Demo video:   <add video URL>

Demo login: parent@demo.chaukas.in / chaukas-demo
```

If in doubt: don’t pay, don’t share an OTP, call 1930.
