CODEVERSE 2026 · OPEN INNOVATION · PROTOTYPE SUBMISSION

Paste the message. Get the verdict. If you’ve already paid, beat the golden hour.

AI scam triage and golden-hour reporting for Indian cyber fraud.

Rules first, AI second, reasons always.

The first hour decides

Fraud is fast. Reporting is slow and confusing.

01

Before the payment

A fake KYC SMS, a “digital arrest” call, a collect request. Victims are rushed and cannot tell real from fake in the minute that matters.

02

After the payment

Banks can still freeze funds early, but the victim doesn’t know what to file, where, or what to say. Panic eats the window.

03

For the family

Parents and elders are the main targets and often don’t read English. Relatives find out after the money is gone.

Two modes, one app

Built and running: web app, API, database, three languages.

MODE 1

Check, before you pay

- Paste text, link, UPI ID, phone or screenshot
- HIGH / MEDIUM / LOW with scam type
- Exact phrases highlighted in your own text
- “Seen before” from community reports
- Never says “safe”

MODE 2

Golden hour, after you pay

- Extracts amount, UTR, payee, time
- 60-minute countdown
- Drafts: 1930 script, cybercrime.gov.in complaint, bank freeze email, scammer report
- Nothing is auto-filed

How a verdict is made

Deterministic first. AI is a bonus, never a single point of failure.

STEP 1

Rules

Multilingual signals plus link analysis. Every hit keeps its exact phrase.

STEP 2

Community

PostgreSQL store of reported UPI IDs, phones and domains.

STEP 3

Gemini

Vision plus structured JSON. Optional, 10-second timeout.

STEP 4

Merger

Combines scores, cites phrases, drops anything not in the text.

If Gemini fails or no key is set, steps 1, 2 and 4 still return a verdict.

What is built

Prototype scope against the idea deck

Feature	Status
Rule engine: 10 scam families, 4 scripts (EN, romanised HI, Devanagari, Gurmukhi)	Built · 40 automated checks pass
Link analysis: lookalike brands, shorteners, IP hosts, TLDs	Built
Community scam-intel store and “seen before” escalation	Built · demo seeded, prod starts empty
Gemini screenshot reading, structured JSON via Spring AI	Built · optional, needs API key
Golden-hour extraction, countdown, four drafts in EN / HI / PA	Built
Family guardian invites and alerts (scam type only)	Built
JWT auth, rate limit, Flyway, Docker, Render and Vercel config	Built

Architecture and stack

Frontend

React 18, Vite, Tailwind. Check, Golden hour, Family. English, हिन्दी, ਪੰਜਾਬੀ.

API

Java 21, Spring Boot 3.4, Spring Security with JWT and BCrypt, virtual threads, rate limiting.

AI

Spring AI to Gemini through its OpenAI-compatible endpoint. Vision plus JSON, 10 s timeout.

Data

PostgreSQL 16 with Flyway. H2 for dev and tests. Hash-only check history.

Core

Framework-free detection engine: rules, domains, extractor, merger, kit generator.

Delivery

Docker Compose, Render, Vercel. JUnit 5, MockMvc and a core smoke suite.

Designed to be safe to rely on

Choices made on purpose

Never “safe”

The lowest verdict is “no known red flags”, with a reminder it is not a guarantee.

Reasons, not scores

Every flag cites a phrase that is in the text. AI-invented phrases are discarded.

Nothing auto-filed

Chaukas drafts; the victim sends. Missing facts show “please add”, never guesses.

Privacy

Hash-only history. Guardian alerts carry scam type, never the message.

Targets and what’s next

Prototype targets from the idea deck, and the roadmap

Prototype targets

- Paste to verdict in under 5 seconds (rules path is instant)
- “I’ve been scammed” to a fileable complaint in under 3 minutes
- Works with no AI key at all

Next

- WhatsApp / SMS share-sheet intake
- Bank-specific freeze templates
- Voice-note detection for digital-arrest calls
- Privacy-preserving intel sharing with banks
- More Indian languages

Try it

```
Live app: <add Vercel URL>
API health: <add Render URL>/api/health
GitHub: <add repository URL>
Demo video: <add video URL>

Demo login: parent@demo.chaukas.in / chaukas-demo
```

If in doubt: don’t pay, don’t share an OTP, call 1930.
